malattia; tuttavia nessun focolaio secondario collegabile a questo si è verificato né all'interno delle zone di protezione e sorveglianza, né fuori;

Relativamente ai centri di raccolta del seme suino autorizzati ad operare in Italia questi, corrispondono ad un numero estremamente esiguo: 6, di cui 3 nella regione Lombardia, 2 nella regione Umbria e 1 nella regione E. Romagna.

Nessuno di tali centri è ubicato in zone che negli ultimi anni sono state poste sotto restrizione per episodi di CSF o altre malattie infettive epizootiche.

Si ringrazia per la collaborazione e si coglie l'occasione per inviare cordiali saluti.

Monsieur le Directeur,

Veillez lire ci-joint les données demandées concernant le cheptel porcin au Luxembourg par vos soins dans le cadre des pourparlers avec la délégation US:

- nombre de centre de collecte pour sperme porcin: un (1)
- nombre de doses de sperme:
 - * échangées avec les E.M. en 1997: 467 doses importées de la France
63 doses importées de l'Allemagne
 - * échangées en 1998: 616 doses importées de la France
40 doses importées de la Belgique
 - * exportées en 1997: 18 doses
 - * exportées en 1998: 60 doses
- nombre de foyers de peste porcine classique en 1997 / 98 au Luxembourg:
a u c u n

En vous souhaitant bonne réception des données je vous prie,
Monsieur le Directeur, de croire en mes sentiments distingués.

Le Directeur de l'Administration
des Services vétérinaires

Dr. Arthur BESCH

USDA document on risk assessment in relation tot CSF	070-378 51 23		

In response to your above mentioned fax I inform you in relation to the Netherlands as follows.

Since may 1998 there were no changes in the CSF situation in the Netherlands and I informed the US authorities in a most comprehensive way during the CSF-outbreak. Looking to the results of the US biological risk assessment on the CSF situation in the Netherlands I conclude that our information in principle was sufficient.

But for the sake of completeness I give you in brief for the Netherlands the answers on the two issues raised:

1. In the Netherlands operate six pig semen collection centres in agreement with 90/429. Two of them were located in the infected area in the South of the Netherlands and subsequently put under restrictions.
In 1998 a number of 5948 semen units were exported outside the Netherlands (of which approximately 95 % to other EU Member States)
2. In 1997 424 outbreaks of CSF occurred in the Netherlands. In 1998 the last 5 outbreaks were reported. From the total of 429 outbreaks nine were diagnosed outside the - at that moment - areas with restrictions. Three of them (Toldijk 16-07-97, Dalfsen 05-08-97 en Schoondijke 27-08-97) situated outside the infected provinces of Brabant en Limburg.
3. As a matter of fact directly after diagnosis these regions were put under the normal restrictions (80/217). During the last outbreak in the Netherlands no case of CSF was diagnosed under feral pigs.

Betreft : USDA document on risk asesment in relation to classical swine fever.

Dear Dr. Checchi LANG,

I hereby send you additional information on the available data related to the risk analysis for CSF.

1. PIG SEMEN COLLECTION CENTRES

1.1. Number of pig semen collection centres in Belgium:

Total number: 66 (instead of 65) , total number of boars : 1.379

Specialised pig semen collection centres in agreement with Council Directive 90/429/EEC : 30

Number of pig semen collection centres with export activity: 10

regular export activity (> 3.000 doses/ year)	: 5
occasional export activity (< 3.000 doses/year)	: 5

1.2. Total number of semen units exported (1998):

within the EU	: 57.149 doses
outside the EU	: 0

The export is almost exclusively send to the Netherlands. 7 of 10 pig semen centres with export activity are located close to the border with the Netherlands. This is reflected in the number of centres located in the restricted area (1993-1994: 1/10 ; 1997: 4/10), because the restricted area in Belgium were closely related to the CSF epizootic 1997 in the Netherlands.

1.3. Location of pig semen centres in agreement with Directive 90/429/EEC with export activity and located in areas put under restrictions due to outbreaks of CSF in 1993-1994 and 1997 :

id.nr.	province	municipality	CSF 1993-1994	CSF- 1997

B 091	Liège	4601 Argentaau	no	yes > 01/07/1997

2. LOCATION OF THE INFECTED FARMS

1993-1994: 55 outbreaks

1. 1993 : 7 outbreaks

93/1, Wingene 13.10.1993 primary outbreak + immediate stand-still zone with radius 20 km, replaced by a surveillance zone
 93/2 - 93/7, Wingene : 6 secondary outbreaks, located in protection zone 93/1

2. 1994 : 48 outbreaks

2.1. period 15.01.1994 - 07.07.1994 : outbreaks 94/1- 94/45

94/1, Ursel 15.01.1994 : secondary outbreak, 5 km outside the surveillance zone 93/1

94/2 - 94/45 secondary outbreaks and preventive eradications of infected farms the original surveillance zone was adapted several times.

94/2 - 94/42 and 94/44 - 94/45 were all located in the existing restriction zones.

94/43 preventive eradication of a contact farm located 2km west of the surveillance zone.

2.2. period 06.10.1994 - 16.11.1994 : outbreaks 94/46 - 94/48

94/46 : same area as the surveillance zone 94/1 - 94/45, all restriction measures in that area were lifted by the end of August 1994.

94/47 and 94/48 : located in the protection zone 94/46
